Fleet Conversion

CAPABILITIES & HISTORY

Not only does Vanliners deal in one off van conversions but they also specialise in large fleet conversions. Ranging from builders vans to utility vehicles. Vanliners experienced sales team can offer the customer the vast knowledge within the industry and are capable of answering even the most intricate of query.

Vanliners have been established for over 20 years, they were built on the foundation of long term customer partnerships based on the highest standards of quality and exceptional service. The company has enjoyed rapid growth to quickly become a market leader in van commercial vehicle accessories.

Vanliners principle of becoming the first-choice supplier to satisfy customer requirements has enabled them to offer a range of vehicle accessory options. These include; van plying solutions, security systems, VL-Systems modular shelving and bespoke vehicle conversions.

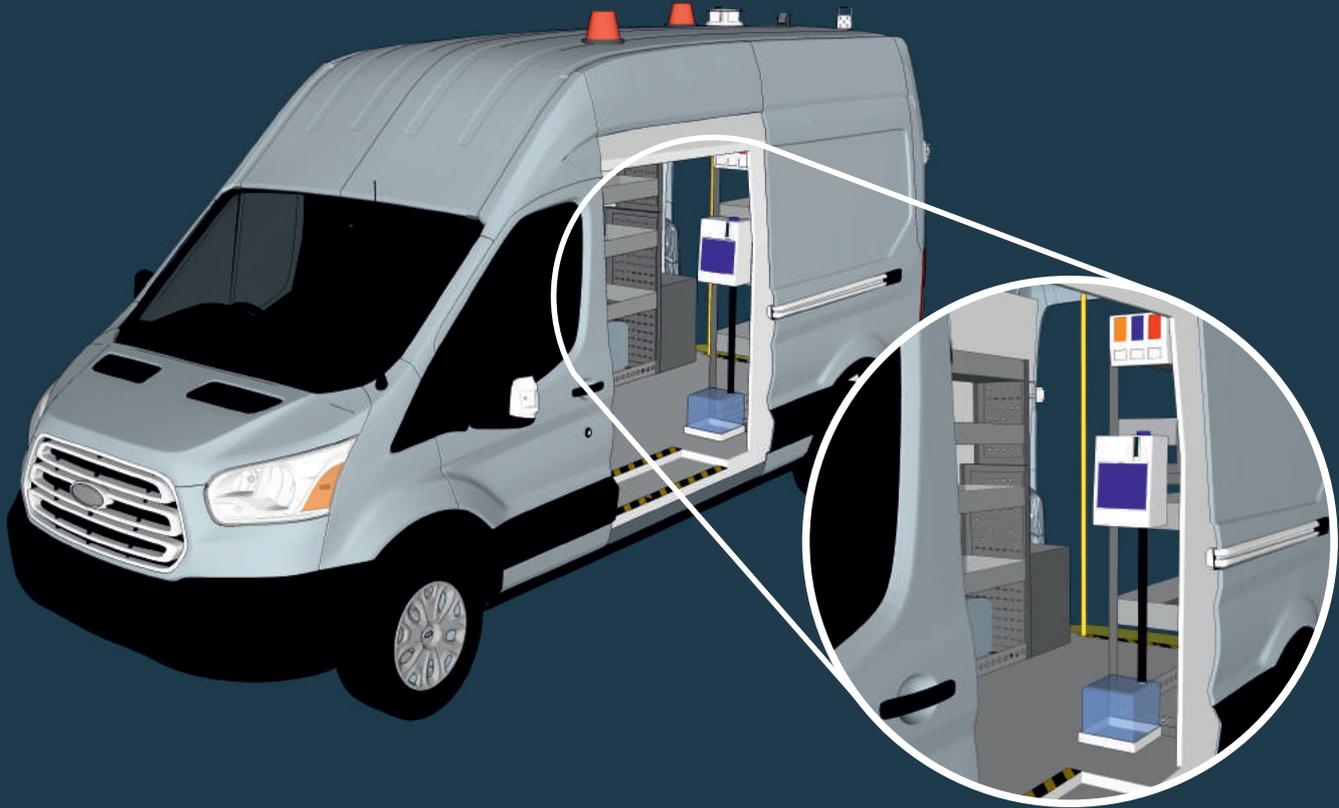

VL-SYSTEMS

FLEET CONVERSION SPECIALISTS

CAD SERVICE

3D VISUALS

With so many different accessories and styles of vehicle conversions it can be hard to visualise what the client is looking to get from their vehicle. To help with this problem Vanliners provide a 3D CAD service to aid the customer with a visual before any work has even started on the van. This way both Vanliners and the customer can agree the perfect solution for their vehicle conversion needs.

“FROM CONCEPT TO REALITY”

This approach is ideal for arranging fleet conversions and is a vital tool for ensuring peace of mind for the client. The 3D model not only show the internal conversions but also external accessories.

BESPOKE CONVERSION OPTIONS

GLASS FRAIL SYSTEMS

Vanliners offer a wide range of internal and external glass carrying systems. Constructed from Aluminium the glass frail offers a lightweight, strong and robust solution to safely transporting glass.

Suitable for nearly all commercial vehicle types the glass frail is the product of choice for many window fitting companies and glass manufacturers alike.

UTILITY CONVERSIONS

Vanliners reputation with Utility companies has gone some way in its growth and development over the years. The relationships they have sustained through its services offered to the customer have ensured that their utility conversions are set in line with current market demands.

Utility vehicle have to be adaptable and be able to perform a range of duties. With Vanliners design software, you are able to see a concept of your conversion. This makes the development and fitment time much quicker as any changes can be made without impacting the vehicle.

PUBLIC SECTOR CONVERSIONS

Vanliners work continuously within the public sector for many housing associations and council groups. Each council offers a different challenge to Vanliners, which they surpass each and every time. With the work they do in the development stage of the contract they manage to please all managers in regards to what they are trying to achieve from the vehicle. It ensures that they can do one job if not more within their daily routine.

Vanliners bespoke service levels offer the client the best possible service and ensure they are 100% happy with their conversion.

INTERIOR LINING OPTIONS

MATERIALS

PLYWOOD LINING

Ply lining a vehicle increases its durability, reducing wear and tear, therefore prolonging its useful life and helping to retain the residual value. The most cost effective method of protecting the interior and easily replaceable if damaged.

As standard floor panels are made out of 9mm plywood and the side and door panels out of 6mm plywood. Thicker floors are available on request.

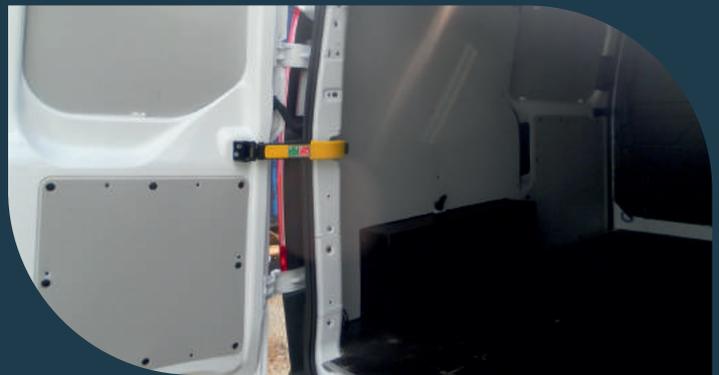

LINE LITE WITH HEAVY DUTY FLOOR

Heavy duty floor and wheel boxes are made from wisadeck, which is a resin-coated plywood that is hard wearing, water resistant & non-slip. It is available in 9mm sheets and is generally stocked in dark brown. 12mm and 18mm are available at request.

Line Lite (plastic, durable and easy to clean) is used for the side panels and door panels. This light weight durable plastic protects the side panels from damage but is also easy to clean.

Either products can be combined with the plywood lining.

SPEEDLINER

Spray lining coats the internal load area of a vehicle in a waterproof polymer. It enables the user a practical, washable and easy clean interior, with the added qualities of internal panel scuff and scrape protection.

The most common interior protective washable coating has traditionally been GRP but this coated application can be prone to cracks, crazing, colour degradation and is becoming more expensive due to the rising cost of the materials used together with the specialised application skills needed.

GRP (GLASS REINFORCED PLASTIC)

Fiberglass is the perfect cost efficient system for the waterproof lining of vans; from fleets of jetting vehicles to Police dog vans, this lining type is a very beneficial way of waterproofing a vehicle. This has also been used in other applications such as window cleaning vans, refrigerated vehicles and even just for hard wearing floors in delivery vehicles.

INTERNAL SHELVING

STORAGE SOLUTIONS

VL-SYSTEMS

FLEET CONVERSION SPECIALISTS

PLYWOOD SHELVING

Plywood shelving is a simple way of utilising the load area of a commercial vehicle. The plywood units are made from 18mm plywood to ensure stability and strength. The standard plywood shelving is a 3 tier construction at a depth of 350 mm. Vanliners also offers a bespoke service which can be made up on site to the customers requirements.

STEEL FRAMED PLYWOOD

Steel framed shelving is used when the clients requirements are a little more heavy duty. Constructed with a 25mm angle steel frame this unit can hold much more weight than standard plywood shelves making it more useful for carrying heavy loads such as tool boxes and other heavy items. These racks can also be constructed to a bespoke specification.

VL-SYSTEMS PLAS-DEC SHELVING

The aluminium framed Plas-Dec racking is generally used when the overall weight of the van is a major priority. With a mixed of Plas-Dec Plastic shelving and the aluminium framed this is the lightest shelf we supply. It is also lighter than modular steel. Due to it being made of plastic the shelves are also very easy to clean so can be used to give a clinical look. This type of shelving is made on site and can also be made to customer specifications.

VL-SYSTEMS MODULAR SHELVING

Standard units are constructed from cold rolled steel. Endframes are powder coated in textured RAL7016 grey / shelves bright zinc galvanized. Open endframes mean these units are superlight and when placed together, the space available can be used for carrying pipes / tubes etc. Shelves are fully adjustable using high tensile 8mm fixings. Fully Crash Tested

Full range of accessories available to suit all shelving units, including rubber matting, bins, bottle holders and perforated end panels.

VAN SECURITY

LOCKS

DEADLOCK

These are additional security locks for your van, similar to the mortise locks on your front door. Available in S series (standard) and on request T Series (Thatcham approved). Deadlocks bring high security protection to van doors under the control of the driver. Ideal for tradesmen and larger operations where drivers can be relied upon to lock the doors.

SLAMLOCK

These are replacement locks for your van that lock automatically when you close your van door.

When they close, they ensure maximum load security combined with easy operation. Individual doors can only be unlocked using the appropriate High Security key. Available in S Series (standard) and on request T Series Slamlocks, T Series are the first slamlocks accredited by Thatcham.

Easy-to-use internal escape mechanism to ensure full Health & Safety at Work Act compliance.

ARMAPLATE

The system works by completely encasing the lock-barrel and surrounding areas and is bolted securely to the door. There are no moving parts and no keys to be lost or broken, security is 24/7 and requires no activation by the driver.

The system has proved to be an extremely effective deterrent and has been used by many blue-chip companies and organisations including divisions of the Metropolitan Police.

ARMADILLO LOCK

The Armadillo is a unique locking system which prevents forced entry to vehicles. Externally fitted to rear and side doors, it has two parts which interlock, joining the vehicle door to the main structure. It cannot be prised open, and it is angled to deflect blunt force blows from a hammer or other tools.

Anti-drill inserts stop thieves penetrating to the locking mechanism. Its protective coating covers the internal and external parts, preventing corrosion and giving exceptional durability and longevity.

ACCESSORIES

EXTERNAL ACCESSORIES

HI VIS REAR STEP

Hi vis Rear van steps and platform steps are designed to make entering and exiting van much safer and easier. They also double up as protection for the rear bumper when loading cargo in and out of vans. Typically van steps are installed using the factory fitted mounts underneath the van. These steps come in a variety of styles and colours depending on the use with tow bars and rear parking sensors.

RHINO SAFESTEP

Rhino Product offers a wide range of steps covering almost all makes of van. These versatile steps while looking stylish also serves their main purpose of making access to the van much easier. Made from strong steel with anti-slip plastic tread plates these steps are TUV approved. They also come with facility for tow bars or reversing sensors.

RHINO IMPACT STEP

The Impact Step has been designed to protect a vehicle from low-speed parking and loading impacts.

The step has been engineered to achieve a safe failure mode to minimise any significant damage occurring to the vehicle chassis.

TOWBARS

Towbars are an important feature for jobs where all the necessary equipment cannot be loaded into the main vehicle and must be "towed" behind on a wagon or utility unit. These come in many types and forms depending on use with options for single or twin electrics and different couplings. The most common type is the jaw and pin (pictured).

ACCESSORIES

ROOF ACCESSORIES

RHINO SAFESTOW 4

Three versions available to safely carry single, double (two parallel) and extra wide ladders.

Multi gas ram assisted (This eliminates the need to lift up/down heavy ladders, significantly reducing potential lifting injuries)

Safe loading and unloading in seconds
Manufactured from highly robust aluminium & stainless steel components

Fully adjustable to carry most ladder types
Secure and lockable (padlock not included)

Load Stops included

Available in 2.2metre (RAS06) and 3.1metre (RAS07) lengths (Please refer to the application to find correct SafeStow ® for your vehicle)

Fully independently approved. 20g crash tested TUV approved

RHINO MODULAR RACK

The Modular Rack is a fully welded, heavy duty system that allows quick and easy installation using bolted together modular sections.

The rack includes a full width front aerofoil that significantly reduces overall wind noise and drag as well as a full width roller system that aids loading and unloading.

All racks enable the transportation of 8' x 4' boards.

VAN SECURITY

STORAGE

CATLOC

The Catloc anti-theft device is designed to secure the Catalytic Converter to a commercial vehicle. The universal design allows the device to mount around most catalytic converters and the stainless ropes wrap around a chassis member rendering the catalytic converter safe.

Manufactured from marine grade stainless steel with two stainless security ropes and complete with a 24/7 ISR (international security register) marking kit to etch a unique code to your converter.

VL-SYSTEMS TOOL-VAULT

VL-Systems sleek NEW Tool-Vault is the perfect storage solution to hold tools. Built from strong durable galvanised steel and finished in a tough black powder coating.

Tool-Vaults are made from a riveted construction with hinged lids, The Tool-Vault also incorporates a gas strut opening lid. All Tool-Vaults are also supplied with an integrated locking mechanism and keys.

SLOPING TOP STORAGE BIN

The sloping top storage bin is designed to store hazardous or flammable materials. They include a hasp and staple enabling the user to fit a padlock if required. The sloping lid prevents items from being placed on the top of the bin. The bins are manufactured from high quality steel and then the metal is powder coated and finished in bright yellow, signposting their hazardous contents. The tray that is supplied is removable, so if there are any spillages internally, the substance can be easily removed and disposed of in the correct manner.

PIPE TUBE CARRIER

Extremely light silver anodised aluminium extrusion combining strength and style. Twin opening and available in 2 metre and 3 metres lengths. Aerodynamic end cones reduce drag and wind noise with integrated locks at both ends supplied with 2 sets of keys

Pipe tube carries with PVC internal liner available on demand to protect your trunking / conduit.

ACCESSORIES

EXTERNAL ACCESSORIES

ROTATING BEACON

The popular design of the 500 series standard beacon features smooth and quiet belt-driven rotators. The rotator incorporates unique free-form optical reflectors to maximise beam pattern and light output.

Approval: 'e' ECE R65

LED BEACON

The powerful LEDs are arranged to produce a brilliant 360 degree flash pattern. This unique design is available in amber or blue with all standard mount options and high or low profile lens.

Approval: 'e' ECE R65

ROTATING LIGHT BAR

Perfect for easy fitting or a quick mount option where drilling is unsuitable. The light bar incorporates the flexibility and cost-effectiveness of a beacon with the visibility and performance of a light bar.

Approval: 'e' Reg 65

REFLEX LIGHTBAR

The Reflex low profile mini LED light bar provides a compact yet powerful warning solution.

Available with either amber or clear lens.

Approval: 'e' ECE R65

EXTERNAL WORK LAMP

External heavy duty shock proof LED work lamp. usually 1 or 2 attached at the rear roof of utility vehicles to help illuminate the work area behind the vehicle. 1100 lumens from the LEDs which is also water resistant.

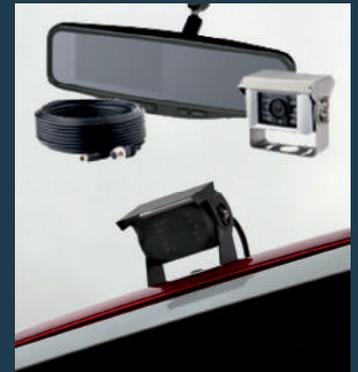

DIRECTIONAL LED

Direction LED's provide a truly outstanding light output in a very cost effective package. These quad flash LED light heads offer fit and forget, maintenance free operation and low amp draw.

WIND DRIVEN VENT

Stale air, strong odours, condensation and excessive heat can create a severely degraded working environment. This wind driven roof vents works 24/7 as long as there is a light breeze. Low profile versions are available at extra cost.

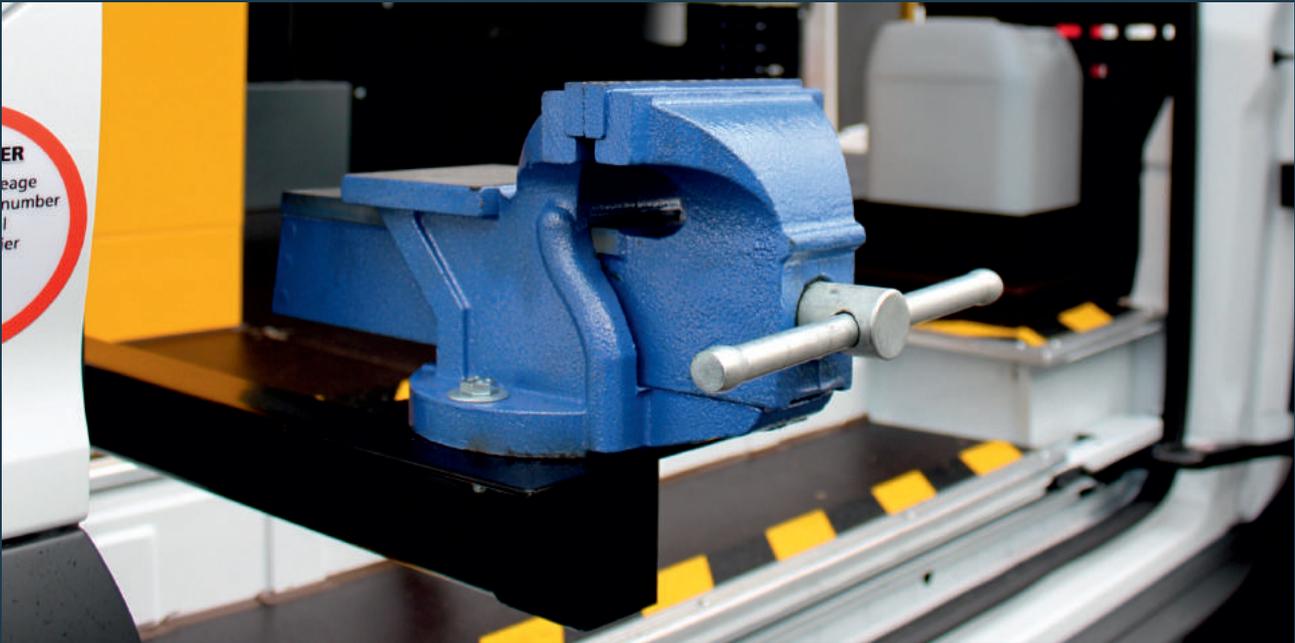

Reversing Camera

Unobtrusive reversing sensor/camera system offers an ideal solution for non commercial and light duty applications where dashboard or cab space is limited. The LCD colour monitor is integrated to a rear view mirror.

ACCESSORIES

INTERNAL ACCESSORIES

HAND WASH UNIT

The Eberspacher Handi Wash Unit supplies hot and cold water at any location. This can be vital for securing health and safety & hygiene requirements. Comes in 12v or 24v variants depending on use.

3 in 1 HAND CARE

Deb Skin Safety Cradle System comes fitted with protective cream, hand cleaner and hand sanitiser. This unit does not require running water or power to be used making it vital for off location jobs.

TOWEL DISPENSOR

The mini towel dispenser is vital in maintaining health and safety standards by allowing the workers to maintain hygiene. This refillable dispenser is a viable option for fleet or maintenance vans.

EYE WASH STATION

Eye wash kit with quick release bracket and carrying handle. This kit comes with two 500ml bottles of sterile eye wash solution, two sterile eye pad dressing important for any off site medical requirements.

ACCESSORIES

INTERNAL ACCESSORIES

FIRST AID KIT

Vehicle first aid kits can be supplied with a soft zip up carry bag or a hard shelled box. Vital for complying with health and safety regulations. Can be placed in various places of the vehicle using a bracket.

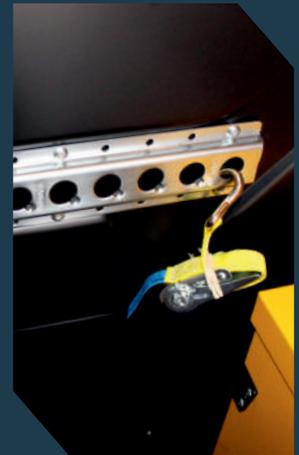

FIRE EXTINGUISHER

Fire extinguishers are always an important asset to any vehicle to aid with health and safety regulations. This item can be purchased in many different sizes with the most common being a compact 2kg version for easy storage.

SLIDE OUT VICE

Slide out vices are important for vans which require a sturdy vice while on the road. They can be placed to slide out the side loading door or rear doors. They can also be placed on internal work benches.

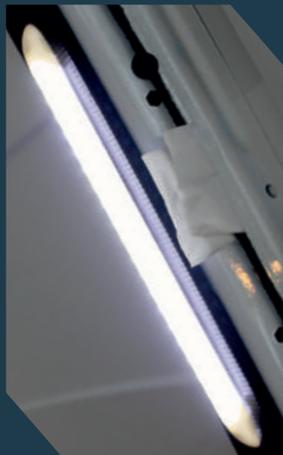

LOAD LOCK

Load lock or Q-plate is used in many applications for helping with storage within the vehicle. The heavy duty steel allows hooks or ratchet straps to be attached to keep items from moving around.

“ACCESSORIES FOR ALL WANTS AND NEEDS”

INVERTER

Installing an inverter and split charger is an alternative option for powering tools or applications without draining the main vehicles battery. Important for charging tools.

LED STRIP LIGHTS

LED strip lights makes working life easier when daylight or factory fitted lighting is not enough. Can be used in conjunction with the factory lighting or put on a switch.

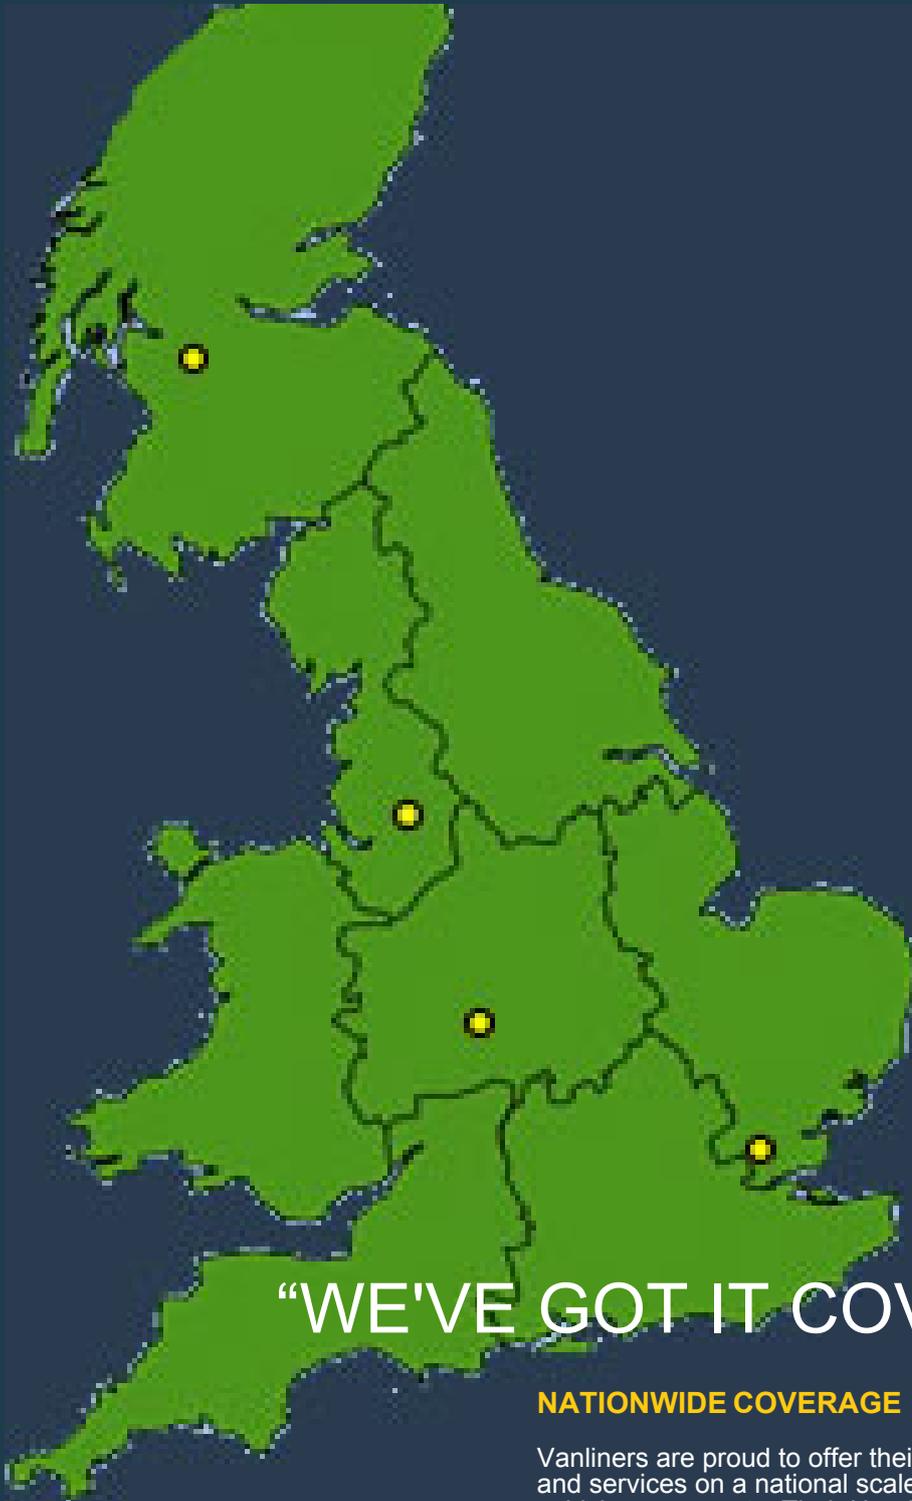

LED WORK LAMP

The LED work lamps can be placed either inside or out side the van. Built on a ball joint the user can direct the light to where its needed using is low power consumption LED's.

LIGHT SWITCH

Weather proof electrical light switch. For use with vans which need to be left open to the elements while work. Water proof and weather proof to ensure no unnecessary problems occur while working.

“WE’VE GOT IT COVERED”

NATIONWIDE COVERAGE

Vanliners are proud to offer their extensive range of products and services on a national scale. Saving the customer costly vehicle movements. Their Head Office is based in Bolton in the North-West where their experienced installation team travel from to complete a whole range of services to ensure 100% customer satisfaction.
